

ANDJELKO CVJETKOVIC

Senior Frontend Engineer · React / Next.js / TypeScript · Node.js

Bosnia and Herzegovina (CET) · Remote · EU work authorization (Croatian citizen)

andjelko.cvjetkovic@gmail.com · andjelko.dev · github.com/andelkocvjetkovic · linkedin.com/in/andjelkocvjetkovic

SUMMARY

Senior frontend engineer with 5 years of experience shipping production web apps as the sole frontend owner on client engagements — from a nationwide map platform for the Czech national recycling authority to a multi-app restaurant operations product. Core stack: React, Next.js, TypeScript; Svelte and Astro in production; Node.js where projects need it. AI-assisted development (Claude Code, Codex) is a standard part of how I deliver, including taking AI-generated prototypes to production. Remote-native: years of async client work, documentation-first habits, CET timezone.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Svelte, Astro

UI & Styling: Tailwind CSS, Radix UI, shadcn/ui, React Aria, design systems

Maps & Visualization: MapLibre GL JS, Visx, Chart.js

Testing: Playwright, Vitest

Backend & Data: Node.js, REST APIs, PostgreSQL, MongoDB, Sanity CMS

Architecture & Practices: SSR / SSG / CSR, i18n, SEO, monorepos

Workflow: Git, AI-assisted development (Claude Code, Codex, Figma MCP), Vercel

EXPERIENCE

Senior Frontend Engineer — Codepool · Jul 2021 – Present · Remote

Software consultancy building products for funded teams across the US and EU. Sole frontend engineer on all engagements below.

- Built and maintain Kamtřídít.cz, a nationwide map of recycling containers and collection yards for EKO-KOM, the Czech national packaging recycling authority — 33,000+ locations kept fast with marker clustering and list virtualization, 200+ active contributors, Mapy.com integration for address autocomplete and turn-by-turn navigation (car, walking, cycling), shipped as web app plus iOS and Android (WebView). (React, TypeScript, MapLibre GL JS)
- Shipped the complete redesign of Čistou přírodou, EKO-KOM's hiking and cycling guide covering 66 routes — pixel-perfect implementation of a new visual identity, with GPX-based route ingestion and interactive map waypoints. (React, TypeScript, MapLibre GL JS)
- Built the shared bilingual (EN/CZ) CMS powering both EKO-KOM products — role-based access (User / Partner / Admin), contributor management with per-user waypoint stats and sign-in provider tracking (Apple, Google, magic link), waypoint detail and moderation views, and per-product editorial workflows including GPX import and entry duplication.
- Took TableTap's admin panel from AI-generated prototype to production, now in use at live restaurants — introduced component architecture and a shared form system where none existed, and hardened multi-branch management: roles, inventory, menus with pricing, availability, allergens, and linked ingredients. (Svelte, TypeScript)
- Built TableTap's custom analytics from scratch (Chart.js), and an AI-powered menu digitization tool that turns a photographed menu into structured categories and items in the app.
- Redesigned the TableTap interface through an AI-assisted design loop — Claude Code and Codex with Figma MCP, producing working prototypes for team review and implementing approved designs directly; also built the product's marketing site (Astro).

EDUCATION

Faculty of Information Technologies, University "Džemal Bijedić", Mostar —
Computer Software Engineering, 2019–2022
